PATIENT CASE STUDY

ASSESSMENT AND PLAN OF CURRENT VISIT

General: *Patient is awake, alert, and oriented to person, place, and time (AAOx3) with periods of confusion. Overall, patient is exhibiting signs of improvement in all areas.*

Vitals:

HISTORY OF PRESENT ILLNESS

Patient is a woman being admitted for home care due to St. II Pressure Ulcer to left heel and need for wound management. Patient has past medical history significant for type 2 diabetes, hypertension, and nicotine dependence. According to patient's husband, John Smith (contact), she has exhibited no cognitive issues or functional deficits prior to this episode of care. The patient has been noted to have a good appetite and denies problems with sleeping or weight changes. She also denies any suicidal ideations and visual/ auditory issues.

Temperature	98.8
Respirations	20
Pulse	75
BP	160 / 95

Cardiopulmonary: *Patient's lungs are diminished, but clear, and patient does not have a cough.*

Gastrointestinal: *Patient has no nausea, vomiting, or constipation.*

Functional: *Patient is homebound due to generalized weakness and a decline in function related to disease process. Patient also uses walker for ambulation and is at risk of falls. Patient uses walker boot to lower left extremity. Patient experienced a fall yesterday while husband, John, was at home. Patient will continue with designed plan of care in addition to sitting in wheelchair and attempting to practice sit to stand. Patient is pleasant and cooperative during treatment session. Patient performed with both upper extremities during the home exercise program with a yellow theraband in order to increase independence in activities of daily living. Patient performs static sitting balance activity with moderate assistance at the edge of her chair. We will address impairments in upper extremity strength by providing interventions in strengthening and caregiver education. Patient has a good rehabilitation potential to improve bed mobility and it seems all goals will be met by next week.*

Complaint: *Patient complains that the Home Health Aide who has been providing care is not giving them enough heads-up time prior to arriving at their home. They would like to have at least 30 minutes heads-up.*

RECOMMENDATIONS FROM CASE CONFERENCE

Patient is improving and meeting her goals, so we should adjust the Plan of Care accordingly. We need to discharge from OT services next week.
